

Radars

A discreet, humane and innovative solution to mouse control

Designed specifically with high risk customers in mind, Radar detects, captures, and isolates mice efficiently, hygienically and humanely.

This innovative system was developed by Rentokil to meet the needs of high risk market segments, where the presence of a single mouse cannot be tolerated. Within these segments, effective pest control is critical to ensure compliance with Health & Safety standards as well as the requirements of customer or supply chain audits.

Radars: Benefits to your business

- Effective 24/7 detection and elimination of mice within your premises.
- Highly innovative, self-contained unit allows for service with no disruption to your business.
- Highly effective
- Discreet and unobtrusive, units are placed at wall floor junctions.
- Simple, sanitary, easy to clean and more discreet than other pest control alternatives.
- Can be used in conjunction with Rentokil's PestNetOnline monitoring and reporting system.

Suitable for a range of customers, including:

- Schools and Universities
- Food Manufacturing Facilities
- Hospitals and Nursing Homes
- Pharmaceutical Industry
- Grocery Stores

How does Radar work?

Our qualified and experienced Rentokil Technicians will identify rodent activity and install the Radar units in appropriate locations.

Radar has two entrances, one at each end of the unit, allowing mice to enter from either direction, as they move along floor/wall junctions, in normal behavioral patterns. When the mouse breaks two consecutive infrared beams, it trips a circuit that immediately closes both entrances. Once the mouse is trapped inside the tightly sealed chamber, the carbon dioxide gas is released. The gas acts extremely rapidly and is widely recognized as a humane method of control.

There is no danger of contamination as the mouse remains completely isolated.

A warning light immediately illuminates to indicate capture.

The unit is self-contained, so it can be safely and discreetly removed from your premises by our qualified and experienced Technicians.

On-going contract maintenance will ensure the optimal performance of Radar, and full compliance with your Health & Safety requirements.

Technical Specifications

Dimensions (L x D x H)	12¼" x 7¾" x 2⅜"
Unit weight (kg)	1 lb. (including full gas canister)
Power supply	6V - 4xAA cell Alkaline battery pack
Material	White Polypropylene casing
Degree of protection	IP21 (drip proof)
Guarantee	2 years
